Key Findings

Total counts for the fourth quarter of 2025, as reported by Illinois law enforcement agencies, were as follows:

- 126 homicides
- 52 homicide clearances
 - 45 clearances were by arrest
 - 7 were by exceptional means
- 1,158 aggravated assaults with a firearm
- 347 clearances of those assaults
 - 318 clearances were by arrest
 - 29 were by exceptional means

Compared to the third quarter of 2025, in the fourth quarter there were:

- 19% fewer homicide offenses
- 31% fewer aggravated assaults with a firearm

Total counts for the most recent 12-month period (2025, Q1, through 2025, Q4), as reported by Illinois law enforcement agencies, were as follows:

- 551 homicides
- 244 homicide clearances
 - 225 clearances were by arrest
 - 19 were by exceptional means
- 5,370 aggravated assaults with a firearm
- 1,442 aggravated assault with a firearm clearances
 - 1,332 clearances were by arrest
 - 110 were by exceptional means

Background

Under the Uniform Crime Reporting Act, the Illinois State Police (ISP) is responsible for storing and providing to the Illinois Criminal Justice Information Authority (ICJIA) those crime statistics required by law to be submitted to the ISP by law enforcement across the state. Correspondingly, under the Illinois Criminal Justice Information Act, ICJIA is required to compile, study, and publish these statistical data on its public website, beginning on September 1, 2026, and continuing thereafter every four months. In particular, the Illinois Criminal Justice Information Act requires reporting at the agency level of (1) homicides and (2) aggravated assaults with a firearm, including counts of offenses, clearances by arrest, and offenses cleared or closed by other exceptional means. A clearance by exceptional means occurs when an offense is cleared for reasons other than arrest, including the death of the person suspected of committing the offense, prosecutorial declination, custody in another jurisdiction, or other circumstances outside of law enforcement control ([20 ILCS 3930/16](#)). ICJIA's reporting is based on data that law enforcement agencies have submitted to the ISP and that ICJIA extracts from the National Incident-Based Reporting System (NIBRS).

This Homicide and Firearm Assault Report is one of three public-facing data products developed by ICJIA to meet statutory requirements. Each reporting product is intended to serve a distinct purpose, allowing users to learn about homicide and firearm assault data by reading a brief narrative overview, exploring an interactive data dashboard, or downloading agency-level statistics. Collectively, the three reporting products offer multiple ways to access and interpret the same underlying data.

Data Products

Summary Report

The present report provides a high-level summary of statewide homicide and firearm assault offense and clearance statistics, as well as methodological information, guidance for interpreting the reported statistics, and agency-level reference tables for the current reporting period. The summary report is intended for users interested in reading a concise overview of the latest statewide statistics or looking up data by agency without having to use the dashboard or downloadable datasets.

Users of the summary report should note that in the agency-level reference tables, “No Data” indicates that no submissions were available for that agency and reporting period. Likewise, the reference tables do not report arrests and exceptional clearances separately, though these two categories of data are reported separately in the dashboard and datasets.

Data Dashboard

The [Homicide and Firearm Assault Dashboard](#) provides an interactive tool for exploring offenses, clearances, and clearance rates for homicide and firearm-involved aggravated assault offenses by county, agency, and time period. Users can examine quarterly patterns; explore clearance types, including arrests and exceptional clearances; and compare statistics for the current reporting period with those from a previous reporting period.

Datasets

Finally, three standardized datasets provide users with agency-level homicide and firearm assault offense and clearance statistics, including clearance counts by different clearance method. The datasets, which compile quarterly counts, the latest 12-month totals, and annual summary statistics, are provided in

downloadable Excel format and include a data dictionary for users who wish to conduct their own analyses.

Methods

Counting Offenses

NIBRS distinguishes between “incidents” and “offenses,” and a single incident may involve multiple offenses. For example, an incident involving a robbery and an aggravated assault is counted as one offense of each type. Furthermore, in cases of crimes against persons (like homicide and aggravated assault), offenses are counted by victim under the corresponding offense type.

Measuring Clearances

In NIBRS, clearance is measured at the incident level, meaning that if any offense in a multi-offense incident is cleared (by arrest or exceptional means), all offenses in the entire incident are considered cleared.

For exceptional clearances, ICJIA reports categories based on the statutory requirements in 20 ILCS 3930/16. The “Other Exceptional Means” category combines the NIBRS categories “Juvenile/No Custody” and “Victim Refused to Cooperate.”

The clearance rate for a given offense type is calculated for each law enforcement agency by dividing the number of a given type of offense cleared by arrest or exceptional means during a reporting period by the total number of that offense type as reported by that agency during that same reporting period. This means that an incident may be cleared in a period after the offense occurred. Thus, the totals represented in the numerator and denominator may not correspond to the same incidents.

Defining Homicide

Homicide offenses refer to “Murder and Nonnegligent Manslaughter” (NIBRS code 09A).

Defining Aggravated Assault with a Firearm

Aggravated assault with a firearm is a derived subset of “Aggravated Assault” (NIBRS code 13A) and is identified using NIBRS weapon or force information associated with each offense. Offenses are classified as “firearm-related” when the weapon type is reported as “firearm,” “handgun,” “rifle,” “shotgun,” or “other firearm.”

Accounting for Reporting Lag

ICJIA assessed reporting lag in NIBRS data by examining changes in statewide offense and clearance counts across multiple data extraction dates. The assessment found that reported counts generally stabilized after a lag of approximately six to eight months. To reduce the risk of misinterpretation based on incomplete data, the most recent reporting periods are excluded from published statistics.

Scope and Limitations

Scope

- This report includes data from January 1, 2025, through December 31, 2025. Data are updated quarterly as new NIBRS submissions become available. Recent reporting periods are excluded from published statistics based on ICJIA’s assessment of reporting lag. See the “Methods” section of this report (“Accounting for Reporting Lag”) for additional information.
- Annual statistics are reported only for complete calendar years. Because annual statistics require compiling data from all four quarters of a year, annual statistics for the most recent calendar year may not be included even when partial-year data are available. For example, if the current reporting

period includes data only through 2025 Q2, the annual dataset will not include 2025 data. However, annual counts for previously reported years may be updated in each quarterly publication cycle as updated NIBRS submissions are received.

- Although the State of Illinois began transitioning from the Summary Reporting System (SRS) to NIBRS in 2021, the present reporting products include NIBRS-based statistics beginning with the 2023 calendar year. Reporting coverage and data completeness were less consistent during the transition period, and data prior to 2023 were excluded from these products.

Limitations

- The statistics presented in these products are intended to support standardized public reporting and transparency. Clearance counts and clearance rates should not be interpreted as standalone measures of agency performance or investigative effectiveness. Clearance rates may be influenced by factors such as case volume, case complexity, reporting practices, and the timing of clearances relative to when offenses occur. In addition, agencies with relatively few offenses may experience substantial fluctuations in clearance rates from one reporting period to the next. These statistics are most appropriately interpreted as descriptive measures of reported offenses and clearances rather than direct measures of organizational performance.
- NIBRS data for the Chicago Police Department (CPD) may be inconsistent with other publicly available CPD sources, thereby limiting statewide analyses. Several factors may contribute to these inconsistencies, including delayed updates that are not reflected in NIBRS submissions, incidents that fail NIBRS validation checks, and differences in legacy system coding and in offense definitions between Illinois statutes and NIBRS. Because these issues can result in undercounts or shifting classifications, users should interpret CPD data with caution and avoid assuming one-to-one comparability across reporting systems. CPD is the largest contributor of reported offenses in Illinois NIBRS data; therefore, these discrepancies may affect statewide totals and trends.
- Because incidents may include multiple victims and multiple offense types, a single incident can contribute multiple offense counts across categories. In such cases, a single clearance decision at the incident level applies to all associated offenses within that incident.
- Offenses are counted in the reporting period based on incident date, whereas clearances are counted based on the date the offense was cleared. As a result, clearances may occur in a later reporting quarter than the original offense, and offense and clearance counts within a given period may not correspond to the same incidents.

Appendix A. Agency-Level Homicide Reference Table

This appendix presents agency-level homicide offenses and total clearances for the current quarter and the most recent 12-month period. “No Data” indicates that no submission was available for the agency during the specified reporting period. Zero values indicate that data were submitted and the reported count was zero. Clearance counts may exceed offense counts during a reporting period because offenses are counted by incident date, whereas clearances are counted by the date the offense was cleared. See “Measuring Clearances” in the “Methods” section for additional information.

Appendix B. Agency-Level Aggravated Assault with a Firearm Reference Table

This appendix presents agency-level firearm-involved aggravated assault offenses and total clearances for the current quarter and the most recent 12-month period. “No Data” indicates that no submission was available for the agency during the specified reporting period. Zero values indicate that data were submitted and the reported count was zero. Clearance counts may exceed offense counts during a reporting period because offenses are counted by incident date, whereas clearances are counted by the date the offense was cleared. See “Measuring Clearances” in the “Methods” section for additional information.

Table 2

Total Firearm-Related Aggravated Assault Offenses and Clearances by Agency in 2025 Q4 and for the Most Recent 12-Months Combined.
